

For engine starting only

Reliable, sturdy and compact, the patented 2326QC Twin Pac is for engine starting only. With its built-in chargers, power plug and cables, this 26V air portable/carry-on START PAC® unit has been designed for voltage sensitive aircraft that cannot accept a true 28V external starter.

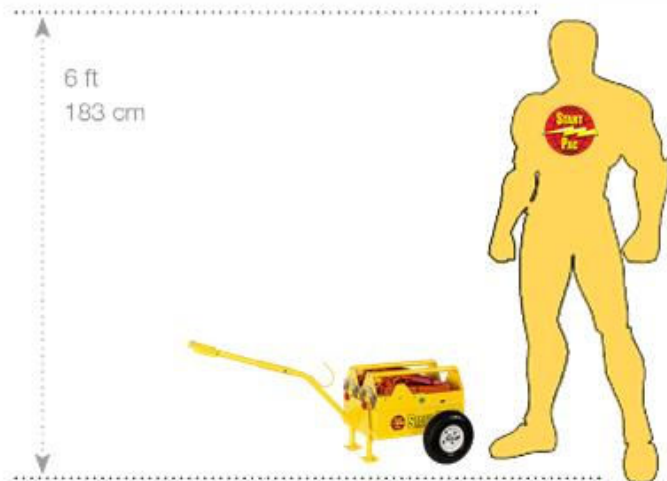

This START PAC® Twin Pac will provide faster and cooler engine starts than most ship's aircraft batteries. Thus, turbine life will be extended because there is less stress on the starter and other engine components. This will preserve the aircraft's costly batteries and help lower operating costs. Your on-board battery can then be saved for emergency use only.

Easily used, both at home base and in the field, this portable starting unit will start any turbine or piston engine. Indeed, it will secure all your engine starts, preventing you from experiencing any downtime, even in remote locations.

Versatile and robust, the Twin Pac can be used as a single unit or separated into two complete units, both easily carried on-board. Using this unit in its Twin Pac set up will provide additional capacity for an increased number of starts before the units need to be recharged.

This patented START PAC® unit has separate removable batteries that can be changed in less than one minute (no tool necessary). This unique feature allows the user to switch the batteries in the field without needing to return the unit to the shop or manufacturer for battery replacement; it's virtually maintenance free.

The environmentally responsible, low VOC powder coating protects the case of the units from wear, tear and poor weather conditions. Additionally, an all-weather accessory is also available as an option to protect the units further from inclement weather ensuring maximum performance and product life.

SPECIFICATIONS

Battery type	Lead acid
Voltage	26 VDC
Peak Current	3500 A
Capacity @10 Amp Rate	56 Ah
Complete Weight	129lbs / 58.5kg
Dimensions - Length x Width x Height	52" x 23" x 23.5" 132 x 58 x 60 cm
Charger type	Built in
Float type charger input	90-240 VAC 50/60 hertz
Charging time range	30 minutes to 4 hours

PRODUCT FEATURES

- Designed for all aircraft including voltage sensitive aircraft that cannot accept a true 28V battery pack
- Versatile and lightweight
- Air portable/carry on START PAC® for whenever power is needed
- Complete all-in-one unit is supplied with built-in universal smart float type chargers for faster recharge, power plug, Twin Pac trolley, "Y" connector and 7ft/2.1m aircraft cables
- Integrated LED charge indicator
- Cold resistant, valve regulated high amperage output lead acid batteries
- Powerful, sealed cells non-hazardous battery pack, can be used in any position. Maintenance free.
- Non toxic, non spillable and recyclable batteries
- Resistant aluminum case with environment friendly, low VOC durable powder coat finish
- Easy to handle, built for heavy duty usage
- Patented Quick Change design : less than one minute battery change for easy replacement
